

## TABLE 1: DISTINCT TAXA

**Distinct:** The taxa in this list are those for which there was sufficient information to unambiguously identify the specimen to the species level. Species that could not be identified definitively can be found in Table 2 in this Appendix.

**Data Listed:** The status of introduction (introduced, cryptogenic, or Native X), the native region for the species, the first year recorded in California, and the potential pathway(s) of introduction are shown for all the distinct taxa found in this survey. Where more than one native range was indicated in the literature, all are listed below. Likewise, all potential pathways recorded in the literature are listed for each species for which there was information. A blank space indicates that the information is unknown.

Pathway Abbreviations:	B - Ballast Water F - Ship/Hull fouling	A - Aquaculture O - Other	I - Intentional Releases U- Unintentional Intro.		Blank Spaces-Unknown
